

Nozzle Melt Monitor (Nozzle protection)

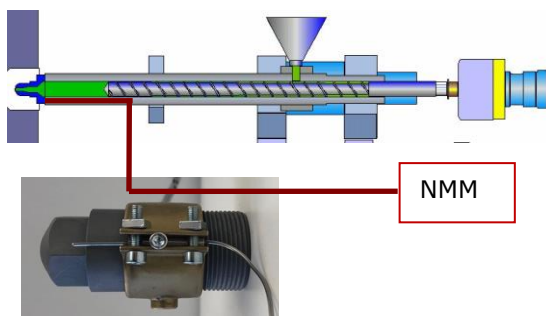

Description

By supervising the nozzles, the melt will be checked whether – caused of leakages – it runs on heating bands or sensors.

Reducing maintenance costs !

Advantages

- preset
- simple set-up change
- fast availableness
- reduces costs for repairing damages
- small invest
- low maintenance factory

Functions

- measurement by pressure difference
- early detection of molding material overrun
- potential free outlet
- data interface (Euromap 77)
- felxible, thin high-grade steel tube (1,6mm)
- guard circuit at the nozzle

Versions

- stand-alone-version
- switch cabinet version
